

# Product Installation Instructions

## Moisture Meter

### To complete installation you will need:

- Moisture Meter (located in your kit)

### Instructions

1. Simply take the Moisture Meter out of your kit and stick the probe end of the meter several inches into the soil.
2. The goal is to have the soil "Moist". If the meter reads "Dry," then you should water the area. If it reads "Wet," then you have probably watered too much and should adjust your watering habits accordingly.
